

webOS Phoenix Field Guide

Cards, gestures and the apps you carry.

Dedicated to the public domain (CC0 1.0).

This little guide walks through the parts of webOS Phoenix you use every day. It is a demo document: PDF View opens it from Files, from an email or from the browser. Try searching it for the word *harbor*.

1. Cards

Every app you open is a card. Swipe sideways to move between them, and flick a card up to close it. Drag one card onto another to make a stack; the stack moves and closes as one.

Tip: tap the top of a card in card view to open it full screen again.

The gesture area below the screen does the rest. A swipe up from it shows your cards; a swipe from the right edge into it is the back gesture.

2. Just Type

Start typing in card view and Just Type searches your apps, contacts, email and the web. Quick actions start a new email, memo, task or voice memo with what you typed.

You type	You get
harbor	the Harbor at Dusk photo, the Harbor Timelapse video, and a web search
milk	your shopping list in Files, and "New Task: milk"
Ada	Ada's contact card and your last emails from her

3. Reading and watching

PDF View shows PDF files with page thumbnails, pinch to zoom and search. Doc View reads e-books, Word, Excel and PowerPoint files, text and Markdown, and remembers where you stopped.

Videos plays the films on your device with subtitles, and picks up where you left off. Podcasts subscribes to feeds and downloads episodes for the ferry, where there is no signal in the harbor.
